DigiVid-X -- Our single unit starter option is an economical multimedia signage player similar to an 80 gig DVD programmable player designed to hold days of entertainment for store front and billboard signage. It is simple to operate, stands alone and is small enough to fit in the palm of your hand. New micro technologies and the unique multi media CPU (Computer Processing Unit) supports the demanding, high definition decoding of MPEG video files. It can be connected to any PC or Mac via USB-2 interface and it supports FAT32, NTSF, and Mac HFS+ formatting. To your computer it looks like an add on hard drive. That means at 480 Mbps transfer rates, movies, DVD's, clips, advertising you create can be dragged and dropped and only takes minutes to transfer. (See Fig. 1) When operating the DigiVid-X as a digital signage player connected to your display, a sophisticated remote control gives you the same control as a DVD player allowing you to program when and what your audience sees and hears. (See Fig. 2)

Connections Made Simple:
